In drilling, there is generally less contamination by coconut fibres, soil and enzymes from the other parts of the coconut. However, the likelihood of contamination increases for mature coconuts. As the fibres are drier and shells are harder, it is easier for them to fall into extracted coconut water.

This is why right after extraction,  
filtration is an important step to remove  
the contaminants.

Germanic origin and cognate to the Latin name for the flax plant, linum, and the earlier Greek ?????? (linón)..

This word history has given rise to a number of other terms in English, most notably line, from the use of a linen (flax) thread to determine a straight line. It is also etymologically related to
